

SolPrint Shopfront Website

The SolPrint Shopfront is a branded shopping website with automated workflow management built in. The style sheet and layout can be configured to promote your image and product range with a number of standard components integrated.

Once configured a Content Management System allows for non-technical staff to update the site as required.

SolPrint Catalogues are configured with each product assigned a workflow to drive either Warehousing, Purchasing or Manufacturing processes.

With options for both guest and registered user access the system will help to drive work to your business.
