

## Document Management and Outlook integration

The SolPrint Outlook module allows for seamless integration between your Outlook email and the SolPrint Management Information System.

If a user receives an email relating to a Quote or Job then by simply clicking the SolPrint button from within Outlook they can store the email and any attachments against the relevant SolPrint record.

Then within the main SolPrint system users can access the Document Management interface to view stored documents/emails irrespective of whether the individual user has deleted the email from their outlook history.

No more lost emails, mislaid documents as everything is centrally stored and accessible to all users.
