Integrated with the Scheduling, Purchasing, Stock and Data Capture areas jobs are listed in their running order with key data highlighted. In the example above the key drivers of Plates and Paper are colour coded to show their current status.

The SolPrint Control Centre is refreshed automatically and as jobs are completed they are automatically removed from the list.

Different views can be created for different business areas such as Studio / Digital / Litho / Finishing and using the Crystal Report Writer any key data can be added to the standard layout.

If you would like to find out how your business can benefit from SolPrint please contact us on sales@solprint.co.uk or call 020 7978 0113.
