

Digital Asset Management System

SolPrint XN now includes Digital Asset Management System (DAMS) functionality.

Digital Images / Assets can be stored with cross reference to the job along with unlimited search tags.

Approval Teams can be defined and assets allocated for approval.

Comments and notes can be attached to the assets with full version control history provided.

Integration with the Customer XN portal allows for clients to approve the assets online assuring the latest version is viewed.

Details of the approval history can then be reviewed if required at a later stage.

Integration with Outlook allows for incoming emails from clients relating to the proof approval process to be associated with the relevant asset for later analysis.

Integration with the Supplier XN portal allows for suppliers to upload/download assets as their rights permit.

The automated workflow provided with JDF integration allows for the approved asset to be passed seamlessly to the production equipment.

Why not contact us now for a no obligation demonstration where we can show you how the SolPrint Management Information System could be implemented within your operation.
