

SolPrint Jobs created directly from Outlook

The SolPrint Outlook module has been enhanced to allow for new jobs to be created directly from Outlook.

Once the "Save" button is clicked a new job is created in SolPrint with the associated email along with any attachments.

SolPrint users can access the Job Document Management interface to view stored documents/emails irrespective of whether the individual user has deleted the email from their outlook history.

No more lost emails, mislaid documents as everything is centrally stored and accessible to all users.
