

Studio and Staff XN

The Studio and Staff XN module allows a browser based interface to be used across the Studio and Shop Floor to collect real-time data and access relevant production files.

Work is assigned from the schedule to individual operators. The operator can then log on / off tasks and the time is automatically collected and booked against the job to highlight actual vs estimating discrepancies.

The current status of the job is updated in real-time and available for review within the main tracking areas of SolPrint.

Jobs can be created and/or updated and any additional charges highlighted for review prior to invoicing.

The Digital Assets Management System (DAMS) can be accessed and the relevant artwork retrieved / stored. Built in approval and version control features make sure the correct version of the files are used.

Access to the SolPrint Document Management functions allow for any emails/documents relating to the job to be easily accessed from the one environment.

All these options are driven from user defined profiles giving control and flexibility when configuring your system.

Why not contact us now for a no obligation demonstration where we can show you how the SolPrint Management Information System could be implemented within your operation.
