

## **SolPrint Die Management**

The SolPrint Die Management module allows for a Die Library to be created with links to the drawings that are stored in the Digital Asset Management System (DAMS).

**Maintain Die**

**Die Information**

Storage Location		Inactive	<input type="checkbox"/>
Size	Large	Comments	

Buttons: Add New, Save, Clear, Create PO, Allocate to Job, View Drawing, Close

New dies can be created along with a Purchase Order to the supplier.

The supplier can then access the Drawings through their Supplier XN portal and update the Die Status as they start to produce it.

Dies are allocated to Jobs with the location / status of the Die tracked. Full audit trails of a Die highlighting any changes / movements made.

When a job is completed the Die will be placed in a Storage location and the audit trail updated accordingly.

Extensive search options are available on the Die Library providing for easy location and tracking of a Die.
